SUMMARY

Results-oriented Senior Computer Science student majoring in Artificial Intelligence with practical experience in full-stack development and automated testing. Skilled in designing complex systems, including medical AI diagnostics and real-time applications. Seeking a challenging engineering internship to leverage expertise in Python, Next.js, and DevOps tools to drive software reliability and innovation

KEY ACADEMIC PROJECTS

Full Stack & QA Lead, OrthoVision (Medical AI Project)

Nov 2025 – Present

- Architected a full-stack assistive application for X-ray fracture detection, combining computer vision with a type-safe web architecture.
- Engineered a hybrid ML pipeline using PyTorch and YOLOv8 to classify and localize fractures with high precision.
- Implemented automated MLOps via FastAPI to dynamically fetch and cache model artifacts, ensuring efficient system performance.

Financial Officer, Cyb Robotics Organization

Jun 2022 – Jul 2024

- Managed a P50,000 operating budget, ensuring sustainable funding for robotics R&D and fabrication projects.
- Guided strategic planning via statistical forecasting, projecting a P10,000 surplus for the academic year.
- Allocated resources for project materials and initiatives while maintaining 100% reporting accuracy.

Backend Developer, WVSUMeet (Real-Time Chat)

Jun 2023–Jul 2023

- Created a Dockerized web app for WVSU students, ensuring consistent testing across development and production.
- Designed MySQL schemas for user data and messaging with optimized queries to reduce latency.
- Validated PHP backend routing and authentication, writing tests to prevent session hijacking and maintain data integrity.

Mobile Development, Benta (POS System)

Aug 2024 – Oct 2024

- Developed a cross-platform Point of Sale (POS) system using Flutter, managing product inventory and sales transaction logic.
 - Conducted UI/Widget Testing to ensure consistent rendering of assets and buttons across different screen sizes and resolutions.
 - Validated state management logic to verify accurate real-time updates of cart totals and inventory deductions during transaction simulations.
-

EDUCATION

BACHELOR'S DEGREE IN COMPUTER SCIENCE

August 2022 - Present

West Visayas State University

- **Major in Artificial Intelligence**
 - **Relevant Coursework:** Systems Programming (Operating Systems), Data Structures & Algorithms, Network Security
-

SKILLS AND CERTIFICATION

- **Technical Skills:** Python (Pandas/NumPy), C++, Rust, Next.js 14, React 18, Docker Containers, Git/GitHub, Linux/Windows CLI, Python Scripting for Automation, API Endpoint Testing (Postman), Unit & Integration Testing, and PowerShell Task Automation.
- **Certifications:**
 - Containers & Kubernetes Essentials, IBM (2026)
 - Oracle Data Platform Foundations Associate, Oracle (2025)
 - Docker Essentials, IBM (2025)
 - Java Programming: The Fundamentals (2022)
 - Web Development Fundamentals, IBM (2020)
